

Text File Upload Feature implemented

The screenshot displays the 'Test Case Generator' web application, which is a RAG-based multimodal chat test case generator. The interface is shown in a browser window at localhost:5173.

Top Section:

- Domain:** Banking
- Attach file:** Uploaded: 2_banking_block_debit_card.txt
- New Chat** button

Chat Area:

- User Message:** Block/Freeze Debit Card As a bank customer I want to instantly block my debit card from the app So that I can prevent fraud if my card is lost or stolen Acceptance Criteria: - Given I select a card, when I tap "Block Card" and confirm, then the card is deactivated within seconds and no further transactions are approved - Given a card is blocked, when I view my card list, then its status clearly shows "Blocked" with a timestamp - Given a card is blocked, when I want to use it again, then I can request a replacement or (if temp-locked) unblock it via OTP verification
- AI Response:** 15 test cases

Test Cases:

- TC-001** Verify successful instant blocking of debit card via mobile app
- TC-002** Verify display of blocked card status in the card list
- TC-003** Verify OTP-based unblocking of a temporarily locked debit card
- TC-004** Verify attempt to block an already blocked debit card
- TC-005** Verify transaction decline for a blocked debit card
- TC-006** Verify request for replacement of a blocked debit card

Bottom Section:

- Domain:** Banking
- Attach file:** Uploaded: 2_banking_block_debit_card.txt
- New Chat** button
- Input Field:** Describe requirements (e.g. "OTP required for transfers above 50,000") to generate test cases. Follow-up messages refine the same result.
- Input Field:** Block/Freeze Debit Card
- Send** button
