

User Review Story Lang flow model:

In the postman collection of my user version Acceptance Criteria was not already present
Added a custom filed in jira and then pulled the custom field in the Body.

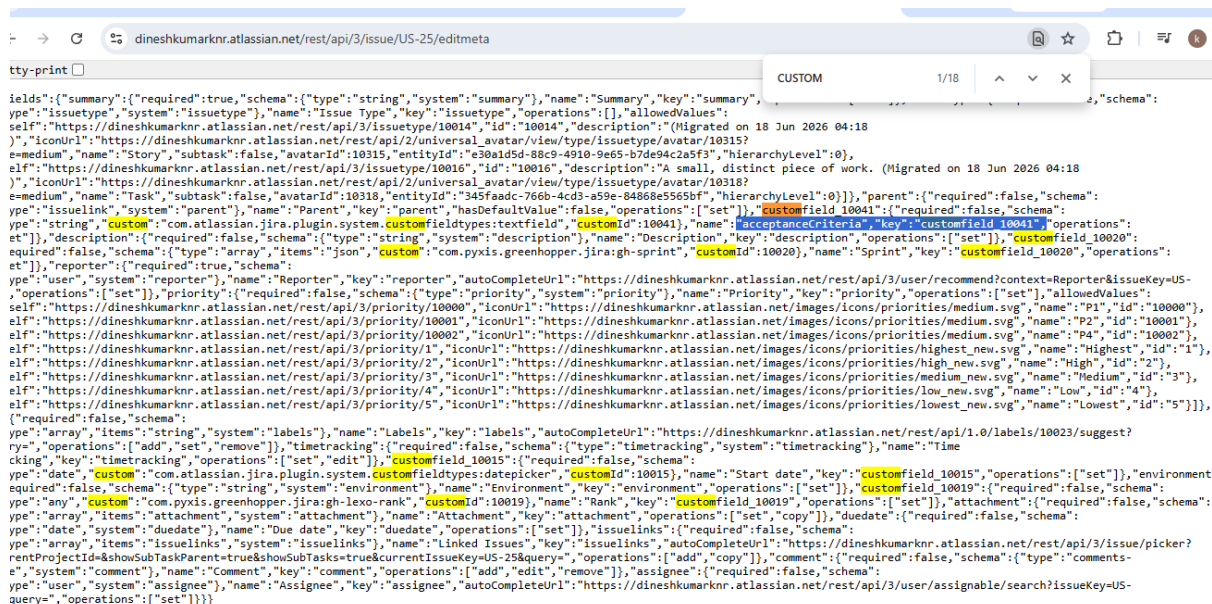

To find the custom field use the below url structure

<https://dineshkumarknr.atlassian.net/rest/api/3/issue/US-25/editmeta>

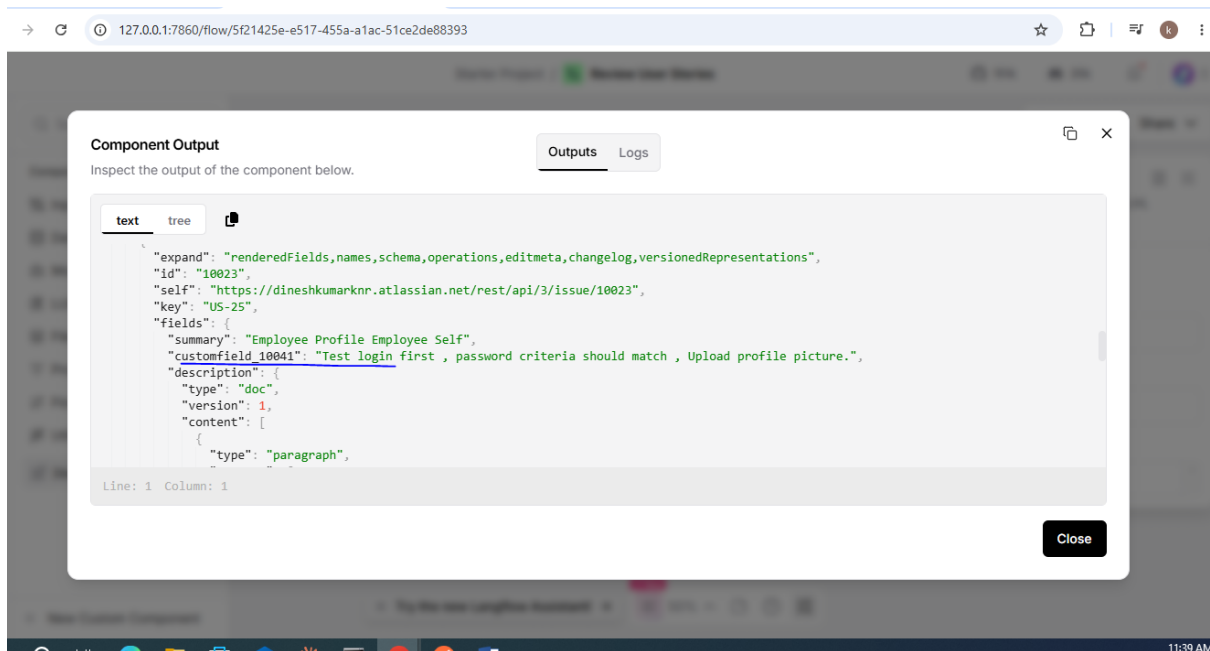

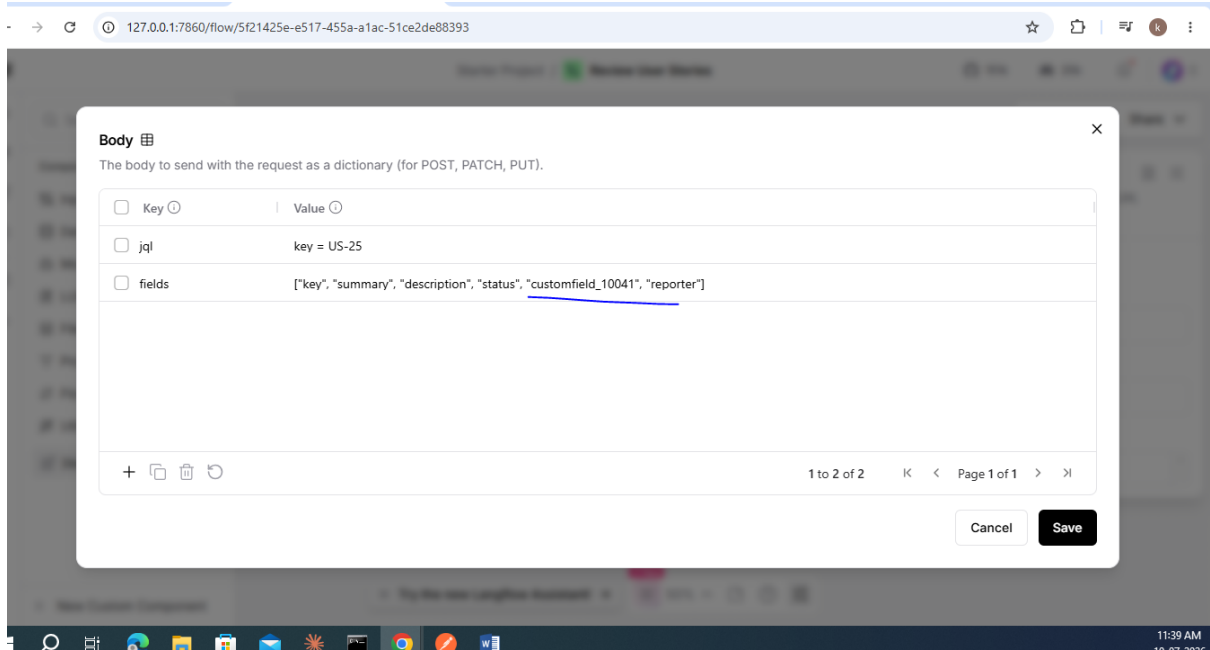

1. Find the custom field's ID

Custom fields in Jira are referenced by IDs like `customfield_10057`, not by their display name. To find it, run this in your browser (while logged into Jira) or via a quick API Request node:

<https://dineshkumarknr.atlassian.net/rest/api/3/issue/US-25/editmeta>

Add the custom key to the body of api request

Final Output:

→ ↺ 127.0.0.1:7860/flow/5f21425e-e517-455a-a1ac-51ce2de88393

Overall Rating (1-10): 4

Justification: This user story has a basic structure, but it lacks clarity, detail, and testability. The description is too vague and doesn't provide enough context about what the employee profile employee self functionality entails. The absence of acceptance criteria makes it difficult to understand what the user expects from this feature and how it will be verified.

Gaps Identified:

1. Unclear Persona: The user story doesn't specify who the user is (e.g., an HR representative, an employee, an administrator).

2. No Measurable Outcome: The description doesn't mention any specific benefits or outcomes that the user will achieve by accessing the employee profile employee self functionality.

3. No Acceptance Criteria: The absence of acceptance criteria makes it challenging to determine what the user story is trying to accomplish and how it will be verified.

4. Ambiguous Language: The phrase "so that the related functionality works as expected" is too

Suggested Improvements:

1. Rewritten User Story: User Story: Employee Profile Employee Self

Description: As an HR representative, I want to provide employees with a self-service portal to view and update their profile information, so that they can easily access and manage their personal details, reducing administrative burdens on HR staff.

Acceptance Criteria:

1. The employee self-service portal is accessible to all employees with valid login credentials.

2. Employees can view and update their profile information, including name, email address, and job title.

3. The system updates the employee's profile information in real-time, reflecting any changes made through the self-service portal.

4. The HR representative can view and manage employee profile information through a separate administrative interface.

2. Add Acceptance Criteria: The rewritten user story includes specific acceptance criteria that
