

Default Langflow Chat for web Pdf File Extract Flow components used

Copy the embed code and save on the notepad.

Go to the Langflow Documentation Trigger flows with the Langflow API | Langflow Documentation and search for (ctrl+f) in the browser embed Link: <https://docs.langflow.org/concepts-publish>

The top screenshot shows the Langflow documentation page for "Trigger flows with the Langflow API". The page lists several methods to run flows from external applications:

- Trigger flows with the Langflow API
- Add an embedded chat widget to a website
- Serve flows through a Langflow MCP server
- Run flows with the OpenAI Responses compatible endpoint

The bottom screenshot shows the "Embed a flow into a website" section, which provides a code snippet for embedding a chatbot into a website. The code snippet includes placeholders for host url, flow id, and api key.

```
1 <html>
2 <head>
3   <script src="https://cdn.jsdelivr.net/gh/langflow-ai/langflow-embedded-
4 </head>
5 <body>
6   <langflow-chat
7     host_url="https://c822-73-64-93-151.ngrok-free.app"
8     flow_id="dcbcd533-859f-4b99-b1f5-16fce884f28f"
9     api_key="$LANGFLOW_API_KEY"
10   ></langflow-chat>
11 </body>
12 </html>
```

When this code is deployed to a live site, it renders as a responsive chatbot. If a user interacts with the chatbot, the input triggers the specified flow, and then the chatbot returns the output from the flow run.

Accept all

More options

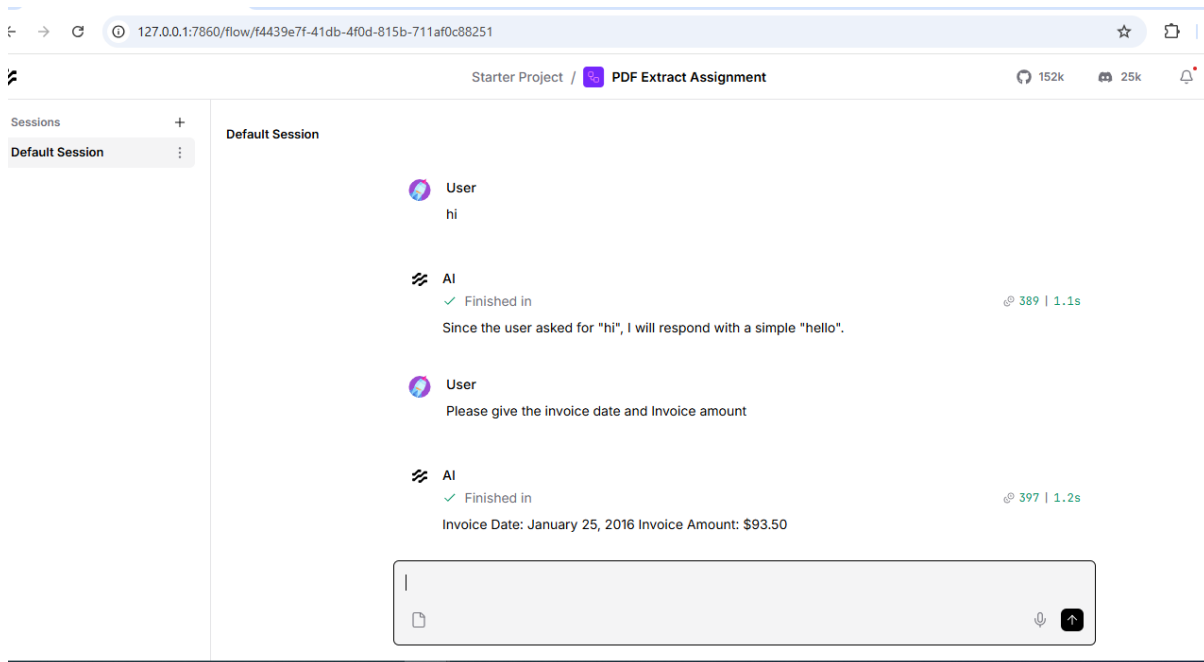

Copy the code for chat bot and replace with the embedded code copied from the langflow

Add mandatory fields host url , flow id and api key

Flow id will be in embed code

api key – create new from langflow

Save the notepad file with extension .html

Modified the pdf extract flow according to the requirement
