Golden Dataset Generator

Synthesize test queries and reference answers from source context (DeepEval)

Generate Golden Dataset

Don't have a test dataset yet? Paste source documents or context below and DeepEval will synthesize queries and reference answers you can evaluate against.

Source Documents / Context

Given the queue is auto-refreshed, then the UI should retain scroll position and active filters without manual reload.

Priority: P1
Risk: Medium
Status: In Progress (Functional Change Pending)

QUERY	EXPECTED OUTPUT	CONTEXT
Compare the AHC queue's 30-second auto-refresh to its prior single-load behavior and filter retention.	The new AHC queue auto-refreshes every 30 seconds, updating patient status instantly, whereas the prior version loaded the list only once when the dashboard opened. The auto-refresh also retains the doctor's scroll position and any active filters (e.g., Emergency), while	User Story: HC-287 – Dynamic Queue List of AHC (Enhanced Real-Time Filtering) Summary: As a ward doctor, I want the dynamic queue list of AHC to automatically refresh every 30 seconds and support filtering by patient priority (emergency vs routine) so that I can attend to high-priority patients first. Description: The existing queue currently loads patient lists only once when the dashboard is opened. The new enhancement adds real-time auto-refresh logic and introduces dynamic filters for patient priority and status ("Waiting", "Under Examination", "Discharged"). The update ensures that queue order and color coding change instantly when the patient status changes in the system. Epic: Wards – Doctors Management Impact Area: Doctor Dashboard / Patient Queue UI Acceptance Criteria: Given the doctor dashboard is open, when a patient status

G-Eval Correctness Metrics

Contextual precision

The screenshot shows the Testleaf Evaluation Suite interface. At the top, there are navigation buttons: "Single Evaluation", "Batch Evaluation", "Multi-Turn Evaluation", "Golden Dataset", and "Custom Metrics (G-Eval)". Below these, a section titled "Retrieval From RAG Or From Document" contains a text box with instructions: "Accepted file formats are JPG and PNG only, max size 5MB. ||| Uploaded images are auto-cropped to a square aspect ratio. ||| Profile pictures are stored". Below this is a "+ Add Context" button. A large green button labeled "Click for Evaluation" is centered. Below the button, a "Response" box displays token usage: "2,029 tokens | 1,367 in | 662 out | \$0.0013". To the right of the response box are buttons for "HTML Report" and "Excel Report". Below the response box, three panels show the evaluation results: "METRIC" is "CONTEXTUAL PRECISION", "SCORE" is "1.0000", and "VERDICT" is "HIGH_PRECISION".

ANSWER RELEVANCY

SCORE

0.0000

VERDICT

NOT_RELEVANT

EXPLANATION

The output contained only unrelated details about the homepage banner, footer copyright, and newsletter signup, none of which address adding items to a cart or using saved payment methods, so the relevancy score is 0.00 and cannot be higher.

EVALUATION INPUT

Query:

As a shopper, I want to add items to my cart and complete checkout with saved payment methods so that I can complete purchases quickly.

Output:

"TC1: Verify the homepage banner carousel rotates every 5 seconds. TC2: Verify the site footer displays the correct copyright year. TC3: Verify the newsletter signup checkbox is unchecked by default."

METRIC

ANSWER RELEVANCY

SCORE

1.0000

VERDICT

RELEVANT

EXPLANATION

The score is 1.00 because the response fully addressed the request with no irrelevant content, earning a perfect relevancy rating.

EVALUATION INPUT

Query:

As a user, I want to upload a profile picture (JPG/PNG, max 5MB) so that my profile looks personalized.

Output:

"TC1: Verify uploading a valid JPG under 5MB succeeds and updates the profile picture. TC2: Verify uploading a file over 5MB is rejected with a clear error message. TC3: Verify uploading an unsupported format (e.g. .bmp) is rejected."

CONTEXTUAL RELEVANCY

The screenshot shows the Testleaf Evaluation Suite interface in a web browser. The top navigation bar includes buttons for 'Single Evaluation', 'Batch Evaluation', 'Multi-Turn Evaluation', 'Golden Dataset', and 'Custom Metrics (G-Eval)'. The main content area displays the results of an evaluation for the metric 'ANSWER RELEVANCY'. The score is 0.0000, and the verdict is 'NOT_RELEVANT'. An explanation states that the output contained only unrelated details about the homepage banner, footer copyright, and newsletter signup, none of which address adding items to a cart or using saved payment methods. The evaluation input includes a query about adding items to a cart and completing checkout, and an output with three test cases (TC1, TC2, TC3) related to site functionality.
